Dear Hiring Manager,

With over 15 years of experience leading enterprise IT strategy, cloud modernization, and platform delivery, I bring a proven record of driving large-scale AWS cloud transformations, optimizing multi-workstream delivery, and building secure, scalable, and automated platforms that align technology with business outcomes.

In my tenure at the IRS, I led the migration of high-volume, mission-critical systems from mainframe to AWS cloud architectures, including EKS-based microservices, S3, DynamoDB, and DocumentDB. I managed 8+ concurrent workstreams, implemented CI/CD pipelines, automated releases, and infrastructure as code, and ensured operational readiness and compliance in regulated environments. These initiatives delivered enhanced system reliability, increased deployment velocity, and streamlined developer workflows.

Earlier, at Booz Allen Hamilton and QinetiQ/3HT, I guided enterprise modernization and integration programs for federal operational systems, providing hands-on architecture, ETL/data integration, and workflow orchestration expertise, while mentoring and coaching cross-functional teams. I am experienced in managing multi-disciplinary teams, vendors, and complex portfolios, making informed technical decisions, and translating cloud strategy into successful execution.

I am particularly drawn to the opportunity to lead AWS platform modernization at scale, optimize multi-workstream delivery, and mentor teams to implement secure, resilient, and automated cloud solutions. My personal interest is to work with Artificial Intelligence and the value it can bring to a company.

I would welcome the opportunity to bring my combination of hands-on AWS expertise, cloud migration leadership, and multi-workstream delivery experience to your company. Thank you for your consideration, and I look forward to discussing how I can contribute to the success of your clients and teams.

Sincerely,

Gary Moreland, PMP, AWS-SAP
